

#### Lessons Learned - Requested Contents:

- Equipment used
- What was the contractor looking for?
- Welder certifications
- Were the welders doing the inspections themselves?
- QC factors or lack of QC
- Due to not reporting & welding correctly
- Not due to corrosion
- Analysis
- Tanks that were previously repaired by this contractor
- Specs are to adhere to the API standards

#### Current TIRM - Part 1 - Non Destructive Testing

Where do we use redundant technologies? How do we conform our results & what accuracy is applied?

How is the specification given to the contractor or is the contractor telling NAVFAC/DLA what they are going to do?

#### Questions to Be Answered in Inspection SOW

- Existing practices
- What is called out for in the contract? Is there a specification?
- What was actually done?
- Was there a modification?
- Prepwork to do inspections
- Validation of inspection technique

PART E Inspection Title: Other/Additional Inspections to be defined by defined by Terri & Danae

PART G Inspection: If no repairs are needed tank can be recommissioned.
